

Tabs

Develop a tabs component that will take in an array of items. Each item will have a label and a content property. When you click on each individual tab header, it should change the state of the tabs so that the correct content is displayed.

Tab 1

Tab 2

Tab 3

Tab 2 content is showing here.

- ☐ Create a tabs component that accepts an array of varying length.
- ☐ Have the tab headers, when clicked on correctly show the appropriate content below.
- ☐ Ninja Bonus: Allow each tab to optionally have a callback which gets fired when the relevant tab header is clicked.
- ☐ Ninja Bonus: Add some CSS animations to the tab switching to smooth out the user experience.
- ☐ Sensei Bonus: Add a JavaScript animation to the tab switching action.
